WHY SKYRIDERS?

South African based Skyriders Access Specialists (Pty) Ltd, a Level 2 BEE company, has extensive experience in providing work at height inspection, maintenance, access and safety solutions to a number of high-profile clients. We work in the international power generation, petrochemical, mining, heavy industry, constructions and facilities maintenance sectors, thanks to or 'out of the box' approach to solving work at height & confined space challenges.

Safety is a strategic Skyriders goal and we are proud that we continue to maintain a zero-fatality record since we began operating in 1999. Our unrivalled record disproves the common perception that rope access is a dangerous means of access. We use highly qualified rope access technicians who have received intensive training and have gained vast experience serving our diverse client base.

Our ISO 9001:2015 & ISO 45001:2018 accreditations as well as our Safety & Compliance RPAS verification support our commitment to continual improvement and implementing best practice standards of business management.

If height and/or confined space is an issue and you are looking for a comprehensive, efficient, innovative, and safe solution, contact Skyriders to learn more about our cost-effective service offering.

When the cost of access is disproportionate to the cost of the scope of work – that's when Skyriders can assist. Making your maintenance, inspection, & construction budgets go so much further.

SKYRIDERS
INDUSTRIAL ROPE ACCESS

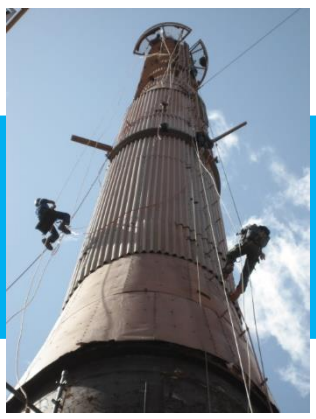

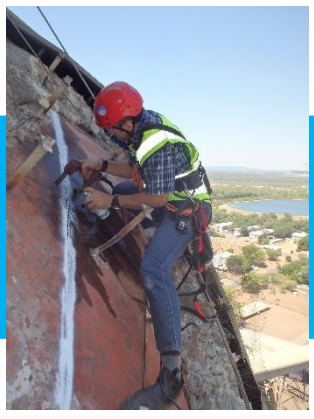

Inspection & NDT

Skyriders Sky Eye
Industrial Drone Inspections Anytime Anywhere

Skyriders performs a variety of inspection and NDT services for the Power Generation, Petrochemical, Cement, Steel industries and general engineering industries. These include:

- **Visual inspections (photographic, videos, thermal)**
- **Boroscope/Endoscope**
- **UT Wall thickness.**
- **Dye Penetrant testing**
- **Magnetic Particle testing**
- **UT Flaw detection**
- **Pipe & Hanger surveys**
- **RPAS (Drone inspections)**
- **Steel & Concrete integrity inspections**
- **Protective coating assessment surveys**

Concrete Services

Tall structures such as cooling towers, silos and smokestacks often have limited or zero means of access. These structures can be accessed using various industrial rope access techniques. Once the access system is set up, temporary or permanent platforms can be installed by the rope access teams who can then carry out a wide range of services including:

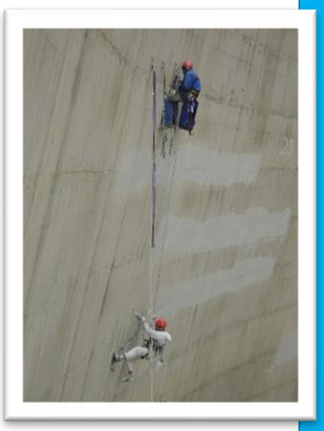

Concrete Inspections

- Visual (internal & external) – Off Ropes or with RPAS
- Cover meter surveys
- Carbonation testing
- Core sampling
- Structural integrity surveys
- Protective coating surveys

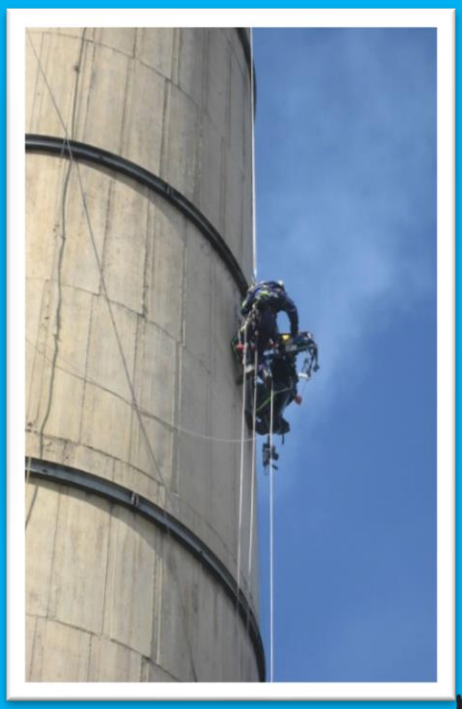

Concrete Maintenance & Repairs

- Cosmetic repair & protection
- Concrete repair
- Structural strengthening.
- Application of corrosion inhibitors
- Application of barrier coatings systems
- Expansion joint sealing

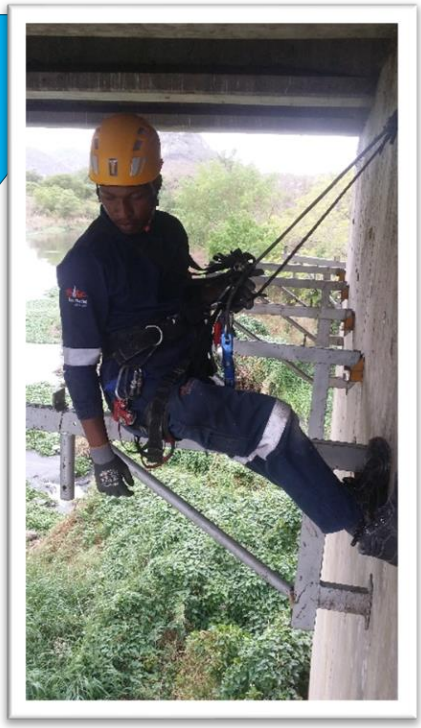

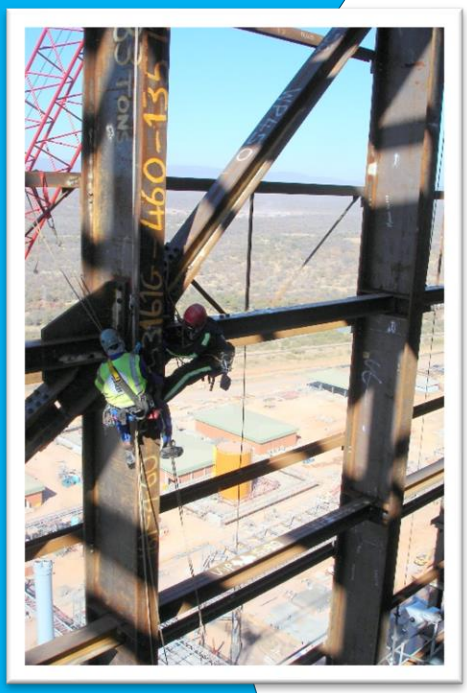

SKYRIDERS
INDUSTRIAL ROPE ACCESS

Installations

- Steel structures erection
- Rigging
- Bolting
- Torque verification
- Temporary work platforms
- Permanent platforms
- Work platform nets
- Height Safety systems

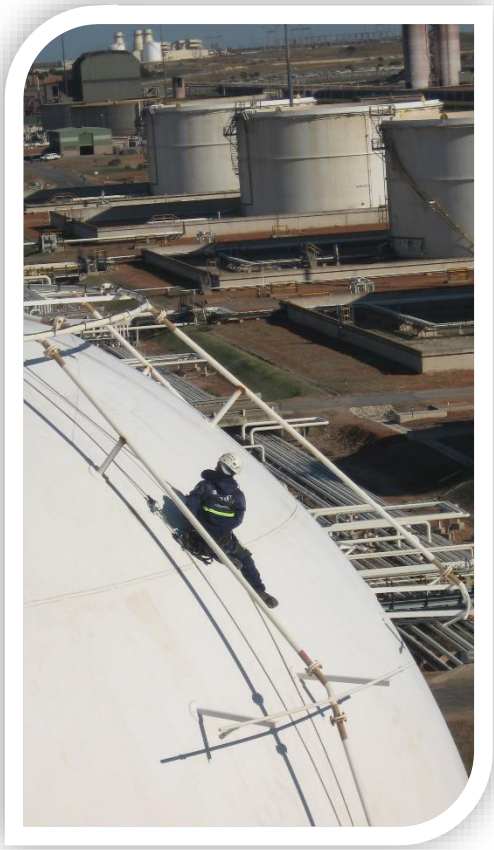

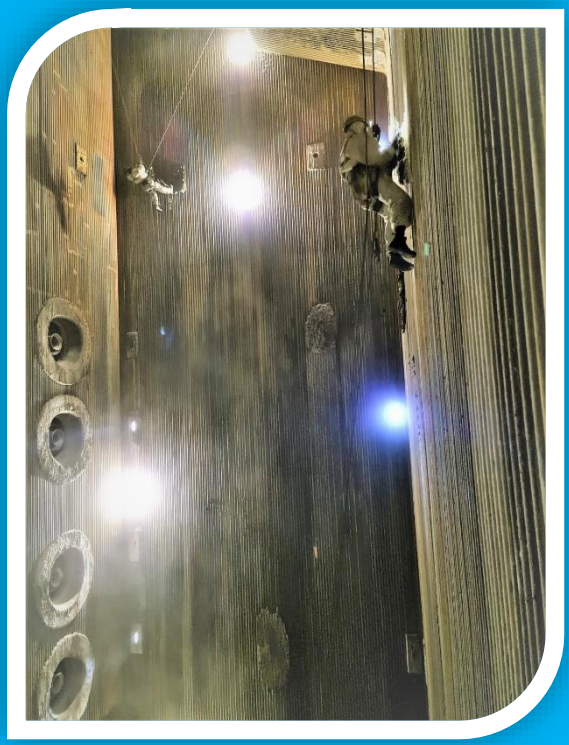

SKYRIDERS
INDUSTRIAL ROPE ACCESS

Maintenance

- Clinker inspections and removal
- High pressure washing
- Welding
- Waterproofing
- Façade maintenance
- Anchor installation & testing
- Lightening protection systems
- Rock barring
- Slope stabilisation
- Snag /punch list items
- Ducting and compensator repairs & replacement
- Window washing
- Bunker lashing / Silo cleaning
- Inaccessible industrial cleaning
- Fire water System (Deluge Systems)
- Grit Blasting
- UHP
- Application of protective coatings (Stoncor/Sika/NU

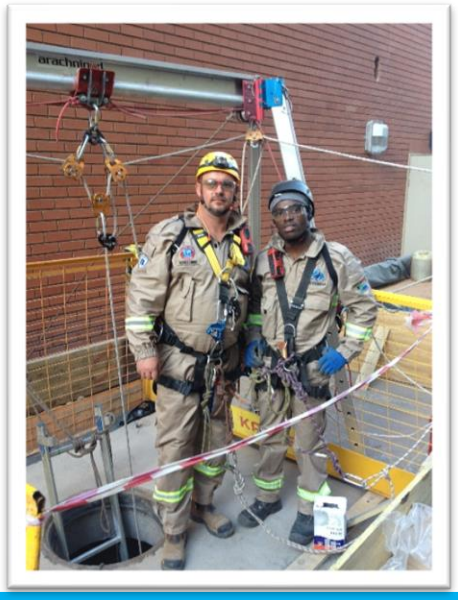

Confined Space

The current Occupational Health and Safety Act (1993) requires that the employer of a confined space worker share the responsibility to ensure that the safety, employers and employees need to comply with the three basic requirements prescribed in section 8 of the Occupational Health and Safety Act. Management needs to ensure that the specific hazard/s in the confined space is risk assessed effectively. (Refer to General

This regulation has proven to be the most difficult for industry. Having Rescue capabilities require additional staff to be hired and trained as well as a significant capital expenditure on specialised rescue equipment – rather let Skyriders look after this aspect of the task on an “as and when” needed basis.

Confined space services:

- Confined space rescue standby.
- Confined space Consultation.

SkyEye

Visual inspections using either SACAA registered drones for out inspections or collision tolerant drones for indoor, confined spa inspections. SACAA ROC No. CAA/G1449D Cert no. FO14713:

- Power Station back pass ducting
- Boiler internals (burners, wall blowers, furnace walls, elements)
- Cooling towers, smoke stacks, cladding & lagging
- Silos external & internal
- Flare Stacks
- Storage tanks (internal & external)
- Reservoirs, Dam Walls
- Roofing
- Confined spaces with Collision tolerant Elios Drone
- Thermal inspections
- Vacuum furnaces
